

# Toy Care

## General Toy Care:

- Before the game, you must be clean thoroughly with soap and warm water then either dry them with a clean towel or let them air dry. Our toys have a habit - they hate the detergent but must pay special attention to the gully on their body they also need to wash.
- After you've finished using your toy, it's important to clean it thoroughly. We recommend using soap and warm water for this purpose.

Silicone may have a subtle "tackiness," meaning it may pick up dust and hairs upon contact, but with occasional washing, your toy will stay clean and hygienic.

### For surface cleaning:

You will need warm running water, mild soap, and a clean towel.

Use mild antibacterial soap and rub your toy thoroughly under warm running water for a complete wash and rinse. Finally, dry it with a clean towel. Store it after it is dry!

### For deep cleaning:

You will need boiling water/a dishwasher and a clean towel.

1 . For cleaning with boiling water, you can first wash the surface with warm running water and soap, then immerse it in boiling water for a few minutes. Dry it with a clean towel and store it once it is dry.

2. If you choose to use a dishwasher for cleaning, ensure your dishwasher has an appropriate sanitizing setting; otherwise, we recommend boiling for disinfection.

In any case, dry the toy with a towel after cleaning and store it dry!

### Cleaning Tube Products:

When cleaning tube toys, rinse the tube thoroughly to remove any residual liquid. Use warm water to repeatedly squeeze and flush the tube until all the liquid is rinsed out. For drying, you can place the tube in a higher position with the tube hanging down so that the water flows out. Store it after it is completely dry.

※ Dry or coagulated residues can damage the tube and toy and may harbor bacteria, so please do a thorough cleaning.

## Toy Storage:

Chat

- When storing your toys, try to do so in a way that protects them. We recommend ziplock bags or clean drawstring bags, stored in a dry location where they will not be squished and are unlikely to have anything spilled on them.
- The last thing you need to know is they can't be exposed to the sun and can't be seen by children. And make sure to avoid storing them in contact with other brands or types of toys. (When stored in contact with toys made of other materials, the materials may react, leading to stickiness and tackiness, which can cause irreversible damage. The same is true for silicone lubes.)
- Remember to wash it before the next use as well, gets rid of lint and anything you missed during the last wash.

## Lubrication:

Never use silicone-based lubricants on Nothosaur toys. If you have silicone lubricants in your collection, we recommend storing them separately from our toys and any other silicone toys you may own. Water-based lubricants, free of silicone, are the best choice.
